ABSTRACT OF THE DISCLOSURE

~~The invention relates to methods and a system~~ Methods and systems are disclosed for the management and transmission of events from a server to at least one client[[,]] ~~by means of~~ via a communication connection[[,]]. ~~whereby the~~ The server has at least one server event service[[,]] communicating with at least one client[[,]] ~~by means of~~ via a communication connection and at least one unit interface[[,]] communicating with the at least one server event service. The client ~~comprises~~ includes at least one client event server[[,]] communicating with the server[[,]] ~~by means of~~ via a communication connection. ~~A logging~~ Logging of possible events takes place in both the client event server and the server event service. Incident events are passed from the unit interface to the server event service[[,]]. ~~the~~ The client event service initiates requests to the server event service and, based on a submitted request to the server event service, the recorded events are transmitted to the client event service. Events received from the client event service are transmitted to a client application.
